

Library Network Topology

Visual Infrastructure & Architecture Map

Library Network Topology Diagram

Network Component Breakdown:

- **External Internet:** The perimeter gateway connecting the local area network (LAN) to the wide area network (WAN).
- **Gateway Router:** Manages core routing functions, including Network Address Translation (NAT) and dynamic IP address provisioning via DHCP.
- **Central Switch:** Acts as the central hardware distribution hub ensuring fast, direct packet switching between all connected systems.
- **Wired Infrastructure:** High-reliability connections reserved for internal Staff Desktops, Public Desktops, and the primary Library Server (DNS & Cataloging).
- **Wireless Access Point (AP):** Broadcasts the "BookNet_Guest" network SSID, segregating traffic for personal Community BYOD (Bring Your Own Device) equipment.
